

CALL FOR SUPPORT

“Enabling New Horizons for the Media Ecosystem”

ACM Multimedia Systems Conference provides a forum for researchers to present and share their latest multimedia systems related research. MMSys has a long tradition and 2022 will see the 13th edition of the conference. In addition to research papers, MMSys also publishes work from demo, open source and dataset, and reproducibility related works. It is co-located with prominent workshops: Networks and Operating System Support for Digital Audio and Video (NOSSDAV), International Workshop on Immersive Mixed and Virtual environment Systems (MMVE), and Workshop on Network and Systems Support for Games (NetGames).

Conference Topics

MMSys aims to cut across the domains of multimedia systems such as: networking, operating systems, real-time systems, databases, mobile computing, distributed systems, and middleware. As a result, MMSys facilitates a unique opportunity to investigate at the intersections and interplay of the various approaches and solutions developed across these domains to deal with multimedia data types. Many research works and concepts presented at MMSys (and its collocated workshops) have developed into standardization technologies or have informed many of today’s streaming solutions, QoE Models, and end-to-end system aspects.

Some other MMSys points of note:

- MMSys attracts participants from over 20 countries with more than 200 researchers, students, and industry professionals each year.
- MMSys has fostered the publication of more than 350 high quality academic works.
- MMSys and associated workshops have a diverse graduate community.
- Each year MMSys recognises outstanding research, demo and dataset papers by giving multiple awards, which provide excellent visibility to supporters.
- MMSys supporters enjoy many benefits: international visibility, recruitment opportunities, access to cutting edge research.

Platinum: €7500

Gold: €5000

Silver: €2500

Bronze: €1000
